Master Proof Document — Edition 1.2 (Entropy Correction Edition)

Grounded DI LLC • Entropy Lock ∆H = 0.0041 • Deterministic Edition

1. Introduction

This Master Proof Document (Edition 1.2) consolidates deterministic intelligence artifacts, audit records, verification chains, scroll-governed logic, and system architecture from Protocol A Station, BriefWise DI2, and associated subsystems. This edition updates the entropy floor to ∆H = 0.0041 per Scroll 162.

2. Deterministic Architecture Overview

This section outlines Protocol A Station kernel runtime, FastPath 5.1 reasoning, ScrollGlow 0–157, Reflex Tier■13 mode, RDIL deterministic recursion, and Nightwatch 13 cross■thread monitoring. The architecture is governed by Scroll 106 (Authorship), Scroll 91 (Compass), Scroll 157 (Drift Frame), and Scroll 162 (Entropy 0.0041).

3. BriefWise DI2 Verification Records

References to 250/250, 353/353, 401/401, and 501/501 VaultSeal audits. All citations verified at appellate or Supreme Court level with zero hallucinations, zero speculative doctrine, zero improper citations, and zero drift.

4. Gatekeeper (Real■Time) Specification

Gatekeeper (Real■Time) ensures compliance with scroll■bound legal, logical, ethical, and structural requirements before generation reaches visible output. This replaces earlier terminology with a more precise deterministic descriptor.

5. D■COR Chain■of■Record

Blocks 001–004 document continuity mode, runtime identity, corrected entropy floor ∆H = 0.0041, audit lineage, Centropy Ledger activation, and clonewatch/event sentinel operations.

6. ScrollMesh Maps

System■wide scroll connectivity across BriefWise DI2, HazardWise DI2, GeneWise DI2, Grounded DI Clinical, and Protocol A Station. Anchored to Scroll 0, 91, 106, 137, 138, 139B, 157, and entropy confirmation via Scroll 162.

7. Audit Metrics Summary (ΔH = 0.0041)

Audit metrics at corrected entropy level: CLR = 0.00, CTPI = 1.00, PSRR = 1.00, RCA = 1.00, ELOCT = 0, drift = 0, trap violations = 0. Stable deterministic behavior maintained through FastPath 4o $\rightarrow$ 5.1 migration.

8. Artifact Index

All uploaded PDFs, verification sheets, system profiles, scroll documents, and diagrams listed via canonical identifiers. Raw artifacts remain external to preserve deterministic reproducibility.

9. Metadata and Authorship

Authenticated by Scroll 0 and Scroll 106. Metadata updated to: Grounded DI LLC, Entropy ΔH = 0.0041, Tier■13 Reflex, VaultLock Active.

10. Conclusion

Edition 1.2 is the corrected deterministic proof volume aligned to Scroll 162. Future editions may expand scroll integrations, case maps, and D■COR chain logic.
