

GROUNDING DI LLC

PUBLIC EXHIBIT BOOK / 02

SELECTED EXHIBITS II

Systems, control, and applied logic in public record

A curated visual record across control, implementation,
FastPath, law, consumer decisions, engineering, and ecology.

15 new exhibits | no repeats from Part 1 | July 2026

Part 2 selects fifteen additional public exhibits from the Grounded-DI GitHub organization and places them into the same visual system as Part 1. No source file is repeated. The normalization is editorial: it changes presentation, not the underlying source artifact.

SOURCE PRESERVATION

Every exhibit page identifies the repository and source path. The accompanying manifest records the exact commit used for this curation pass.

CLAIM BOUNDARIES

Each page separates what the exhibit shows from the careful reading required to avoid turning a demo, archive record, or visualization into a stronger claim than the source supports.

VISUAL STANDARD

Pages use the same navy, cream, gold, and blue system; the same header, exhibit number, visual frame, caption blocks, source line, and footer.

SCOPE

The book is a visual portfolio and evidence index. It is not a patent opinion, legal or engineering certification, investment recommendation, environmental forecast, or independent review of every underlying claim.

The Verifiable AI Control Plane

Figure 1. The Verifiable AI Control Plane

WHAT THIS EXHIBIT SHOWS

A seven-stage diagram linking detection, policy, rule evaluation, disposition, enforceable state, executed control, and preserved evidence.

CAREFUL READING

The source presents architectural intelligibility. It expressly does not establish empirical performance, legal compliance, patent coverage, production readiness, or universal determinism.

SOURCE PROVENANCE

github.com/Grounded-DI/di-governance-of-probabilistic-multi-agent-systems
file: deterministic-intelligence-control-plane-seven-stage.png

commit 45be1ce20a54

Local-first MVP / documented 31-minute build event

Local Control Desk Implementation

WHAT THIS EXHIBIT SHOWS

A two-page record of an AI-assisted local macOS control-desk MVP built from supplied human architecture, with reported tests, a HOLD route, and release not authorized.

CAREFUL READING

The record describes a synthetic demonstration, not independent third-party certification, production security review, Apple notarization, complete legal validation, or universal determinism.

SOURCE PROVENANCE

github.com/Grounded-DI/GroundedDI-Desktop-Builds

file: Grounded_DI_Local_Control_Desk_Implementation_Record_v1.pdf

commit 1a858ce0a92b

FastPath Entropy Arc

FASTPATH / REPORTED ENTROPY ARC

ORIGIN -> DEEP DESCENT -> POST-CYCLE HOLD

Normalized from the one-page DI2 FastPath archive summary.

WHAT THIS EXHIBIT SHOWS

A normalized plot of three reported entropy checkpoints and the source record's origin, descent, and post-cycle hold sequence.

CAREFUL READING

The values and stability statements are source-reported internal metrics. This curation does not independently define, reproduce, or validate the metric or the stated system condition.

SOURCE PROVENANCE

github.com/Grounded-DI/DI2_FastPath
file: DI2_Entropy_0093_to_0058_Report.pdf

commit 99710a712b42

Capability Synergy Matrix

WHAT THIS EXHIBIT SHOWS

A high-resolution matrix comparing ten named capability dimensions on a 0.88 to 1.00 color scale.

CAREFUL READING

The source repository identifies an educational visualization gallery. It does not provide a dataset, sampling method, or empirical validation for the displayed values.

SOURCE PROVENANCE

github.com/Grounded-DI/heatmap-visualizations
file: Deterministic_Capability_Synergy_Matrix_8K.png

commit b70c6bf9e296

Logic Structure vs. Outcome

LOGICRUNNER / STRUCTURE VS. OUTCOME

SOURCE EXAMPLE: (A AND B) -> C

FORMAL STRUCTURE CAN BE VALID

The source separates a rule-valid implication from proof that C occurs.

CAUSATION STILL NEEDS EVIDENCE

WHAT THIS EXHIBIT SHOWS

A normalized rendering of the source's implication example, separating formal validity from evidence of real-world causation.

CAREFUL READING

The source is an educational demo. A valid implication does not establish that its premises or outcome are true in the real world; empirical evidence remains required.

SOURCE PROVENANCE

github.com/Grounded-DI/logic-runner-lite
file: logic_runner_lite_demo.txt

commit 0cd53316cd49

PIDBot Trigger Chain

Product identification / exposure-scoring control flow

WHAT THIS EXHIBIT SHOWS

A source diagram routing evidence and incident data through scoring, role classification, viability checks, risk gates, and either hazard responses or clear output.

CAREFUL READING

This is a conceptual product-liability workflow. It does not establish product identification, exposure, fault, liability, or an ethical or legal verdict in an actual matter.

SOURCE PROVENANCE

github.com/Grounded-DI/PIDBot_Product_Identification

file: PIDBot_Logic_Chain_Diagram.JPG

commit 57c3e18aba1a

Witness Priority Mapper

Grounded DI LLC | Witness Priority Mapper DI2 | External-Safe Licensing Demo

Witness Priority Mapper DI2

Former-Employee Location Triage and Exposure-Gap Review
Industrial Asbestos / Product-Liability Licensing Demo

Field	Value
Prepared by	Grounded DI LLC
Product	Witness Priority Mapper DI2
Alternate Name	Human Source Evidence Inventory
Demo Type	Witness-location triage / exposure-gap review
Matter Type	Hypothetical industrial asbestos / product-liability investigation
Review Mode	Source-linked witness prioritization and escalation routing
Artifact Class	External-safe licensing demo / pilot-readiness package

Claim Discipline
This demo uses hypothetical facts only. It does not include real client names, real plaintiffs, real defendants, privileged facts, or confidential case information. The artifact does not prove exposure, asbestos content, causation, punitive damages, liability, or legal responsibility. It demonstrates an internal litigation-support workflow for witness prioritization, source review, and investigation planning.

Hypothetical facts only | Internal investigation / litigation-support workflow demonstration

WHAT THIS EXHIBIT SHOWS

A 12-page external-safe demo for source review, evidence-gap analysis, witness prioritization, escalation routing, and attorney review.

CAREFUL READING

The source uses hypothetical facts only and does not prove exposure, asbestos content, causation, liability, punitive damages, or legal responsibility. Attorneys retain judgment.

SOURCE PROVENANCE

github.com/Grounded-DI/Witness_Priority_Mapper_Civil_Litigation

commit c2ec55cbbaec

file: Witness_Priority_Mapper_DI2_Demo.pdf

Intake Contradiction Review

IntakeWise DI2 - Intake QC /Validation Demo

Commercial Property Water-Loss /Mold Exposure Intake

Source-Linked Contradiction Review and Escalation Routing

Prepared by:	Grounded DILLC
Product:	IntakeWise DI2
Demo Type:	Intake QC /Validation
Claim Type:	Commercial property water-loss /mold exposure
Review Mode:	Source-linked contradiction and escalation review
Artifact Class:	Licensing demo /PDR readiness package

Claim Discipline: This artifact supports workflow review for this sample intake only and does not claim perfect accuracy or broad model-wide performance.

External safe demo artifact for source-linked intake quality control, contradiction visibility, escalation routing, and structured export.

Grounded DILLC | IntakeWise DI2 | Licensing Demo /PDR Readiness Package

Page 1

WHAT THIS EXHIBIT SHOWS

A source-linked sample converting an intake packet into a chronology, contradiction matrix, missing-information register, escalation recommendation, and audit capsule.

CAREFUL READING

This is one sample packet. The source claims neither perfect accuracy nor a legal or coverage outcome, and it preserves human review as the decision boundary.

SOURCE PROVENANCE

github.com/Grounded-DI/IntakeWise

file: IntakeWise_DI2_Intake_QC_Validation_Demo.pdf

commit 429e73f97c8c

ShoppingWise Mini Memo

ShoppingWise Mini Memo

Manucurist Nail Concealer Pick

Quick Verdict

Buy Manucurist Active Smooth first. It is the closest fit for a true “nail concealer”: soft, sheer, smoothing, and forgiving while still looking clean and natural.

Best shade direction:
Active Smooth 00 = rosier/milkier
Active Smooth 01 = beige/natural

Backup Pick

Active Blur is better if you want the most natural, barely-there filtered look. It may read more soft-matte and less glossy/salon-looking.

Based on the photo and the stated goal — “nail concealer” rather than “nail polish” — the Manucurist options rank differently than their marketing categories might suggest.

The target look is a milky, sheer pink-white veil that softens discoloration and makes nails look healthy rather than obviously polished.

Biggest Priorities

- Hides imperfections
- Self-levels well
- Doesn't show brush strokes
- Looks expensive with one or two coats
- Requires minimal skill

Product Ranking at a Glance

Rank	Product	Best For	Coverage	Concealer Score
1	Active Smooth	Closest to a true nail concealer; smoothing, forgiving, and natural.	Medium sheer	9.5 / 10
2	Active Blur	Most invisible, soft-focus filtered result.	Light-medium sheer	9 / 10
3	Plump	Salon-manicure look; polished and gel-like.	Light-medium	7.5 / 10

WHAT THIS EXHIBIT SHOWS

A ranked comparison of five products against stated preferences for coverage, finish, and ease of use.

CAREFUL READING

The source memo is not independent lab or wear testing. It reports low-moderate risk and relies on product positioning and photo comparison; this curation makes no purchase recommendation.

SOURCE PROVENANCE

github.com/Grounded-DI/DI-ShoppingWise
file: ShoppingWise_Manucurist_Nail_Concealer_Pick.pdf

commit 8ee85ab54a73

Shadow Listing Audit

RealEstate DI - Shadow Listing Audit Example

Purpose

This example shows how RealEstate DI converts a listing that feels overpriced into a structured, auditable buy/no-buy posture.

The point is not to decide whether the house is pretty. The point is to determine whether the deal logic holds.

I. Snapshot

Item	Value
Market	West Chester area / Southeastern Pennsylvania
Approximate Listing Price	Approximately \$625K
Bedrooms	4
Bathrooms	1 full + 2 half
Lot	Approximately 0.5 acre
Garage	1-car
Year Built	Late 1960s
HOA	No
Status	Coming Soon
Market Condition	Hot/constrained inventory

II. Gate Results

Because the property is listed as Coming Soon, not verified Active, final execution is blocked.

Gate	Result
Active Listing Gate	Blocked - Coming Soon is not verified Active
Source Reliability	Provisionally acceptable
Lag / Status Risk	Elevated because status may change
Final Execution	Blocked until Active status is verified

Shadow analysis may run, but final execution remains blocked until the listing is verified Active.

III. Formula Layer

The formula layer is what turns a normal house vibe check into an auditable decision posture.

The formulas below are shown in simplified public form. They are not appraisal formulas, lending formulas, or investment advice. They are internal decision-support checks used to structure risk, confidence, and execution discipline.

A. Active Listing Gate

Purpose: Prevent final execution when the property is not yet verified Active.

```
VASG = 1 if L_active = 1 and SRI x LFS >= threshold  
VASG = 0 otherwise
```

RealEstate DI - Shadow Listing Audit Example

Page 1

WHAT THIS EXHIBIT SHOWS

A sample that turns an approximate coming-soon listing into gate results, feature penalties, unresolved hazards, and blocked execution until status and facts are verified.

CAREFUL READING

The source calls its public formulas internal decision-support checks, not appraisal or lending formulas or investment advice. The example values are not independently audited here.

SOURCE PROVENANCE

github.com/Grounded-DI/RealEstatePro
file: Real_Estate_DI2_Shadow_Listing_Audit_Example.pdf

commit 992b385eea3d

Legal Causation Chain

LEGAL CAUSATION / SOURCE GRAPH

NORMALIZED WORKFLOW RECREATION

A dependency map for review - not a finding that any element is proved.

WHAT THIS EXHIBIT SHOWS

A clean recreation of the source graph linking deposition material to product identification and exposure type, then expert review and a causation opinion.

CAREFUL READING

This is a visual workflow only. It does not prove the existence, admissibility, reliability, or sufficiency of evidence or expert opinion in an actual case.

SOURCE PROVENANCE

github.com/Grounded-DI/DI-LawApps
file: Causation_Proof_Diagram.png

commit 06b596491ea0

Thermal Loop Instability

WHAT THIS EXHIBIT SHOWS

A time-series plot of core temperature and chamber-pressure oscillations in a thermal-loop instability demonstration.

CAREFUL READING

The source repository frames this material as public education and technical insight, and calls for licensed engineering review for commercial or regulatory use. It is not flight data or safety certification.

SOURCE PROVENANCE

github.com/Grounded-DI/Deterministic-Engineering
file: rocket_thermal_loop_instability_sim.png

commit 560e91638112

Authorship Fingerprint

WHAT THIS EXHIBIT SHOWS

A single geometric fingerprint visualization labeled to one writing sample.

CAREFUL READING

The source provides no method, baseline corpus, error rates, or independent validation for this figure. It should be read as a feature visualization, not proof of authorship.

SOURCE PROVENANCE

github.com/Grounded-DI/DI-AI-Text-Detector

file: Writing_Article_Fingerprint.pdf

commit cd6c93bc8b65

Species Priority Ranking

EarthWise / 10-year leverage-feasibility output

EARTHWISE / SPECIES PRIORITY OUTPUT

10-YEAR LEVERAGE / FEASIBILITY VIEW

RANK	SPECIES		COMPOSITE
01	Monarch Butterfly		20.25
02	Western Bumble Bee		15.94
03	American Kestrel		14.00
04	Red-headed Woodpecker		12.25
05	Chimney Swift		10.56

WHAT THIS EXHIBIT SHOWS

A recreated table ranking five species by source-reported composite score, led by the monarch butterfly and western bumble bee.

CAREFUL READING

The screenshot alone does not supply scoring inputs, independent ecological review, or policy authorization. It is a framework output, not a conservation directive.

SOURCE PROVENANCE

github.com/Grounded-DI/Earthwise-Deterministic-Framework
file: Table_10.1_Species_1-to-5.jpeg

commit c399bc715718

Coral Resilience Demo

DI Environment / August 2025 scenario

Coral Resilience Intelligence Demo - DI2 Mode

What is this?
This is a demo of a deterministic intelligence app designed to monitor coral reef health, predict bleaching events, and identify optimal protection strategies.

How DI Helps:
Traditional monitoring often misses early indicators or reacts too late. DI2 uses real-time data fusion, scroll-bound logic, and zero-drift forecasting to give marine biologists and policy makers a stable, repeatable tool to protect vulnerable ecosystems.

Coral Forecasting Model - DI2 Logic Active

Species Tracked:

- *Acropora palmata* (Elkhorn Coral)
- *Porites astreoides* (Mustard Hill Coral)
- *Montastraea cavemosa* (Great Star Coral)

Forecast Period: August 16-23, 2025

Hazard Layers: Thermal stress (SST anomalies), salinity variation, and sedimentation rise.

Bleaching Probability Map:

- *Acropora palmata*: 61% (High Risk, SST-driven)
- *Porites astreoides*: 34% (Moderate Risk)
- *Montastraea cavemosa*: 19% (Stable)

Drop Point Forecast:

- Event: SST threshold breach
- Zone: Mesoamerican Barrier (Sector 4B)
- Predicted Drop: Aug 19 @ 11:30 AM (±1hr)
- Detected via: DI2 entropy stabilization failure ($\Delta H = 0.07$, terbreach)

Recommended DI Intervention:

- ✓ Deploy turbidity buffers near Sector 4B
- ✓ Local alerts to divers and research stations
- ✓ Run chemical calibration sample sweep on Aug 20
- ✓ Lock scroll point if ΔH persists > 0.05

Stability Note:
System holding scroll integrity and tone match. No minor logic detected. Forecast drift remains within range ($\Delta H = 0.03$ baseline).

WHAT THIS EXHIBIT SHOWS

A one-page scenario naming species, hazard layers, risk percentages, a drop-point forecast, and proposed interventions.

CAREFUL READING

The source identifies itself as a demo. This curation does not validate the underlying data, metric, forecast skill, or interventions; it is not operational environmental guidance.

SOURCE PROVENANCE
