

GROUNDING DI LLC

PUBLIC EXHIBIT BOOK / 01

SELECTED EXHIBITS

Deterministic Intelligence in public record

A curated visual record across law, replay, hazard,
water, radiology, engineering, mathematics, and provenance.

15 public exhibits • normalized design system • July 2026

This book selects fifteen public exhibits from the Grounded-DI GitHub organization and places them into one visual language. The normalization is editorial: it changes the presentation, not the underlying source artifact.

SOURCE PRESERVATION

Every exhibit page identifies the repository and source path. A manifest records the exact commit used for the curation pass.

CLAIM BOUNDARIES

Each page separates what the exhibit shows from the careful reading required to avoid turning an illustration, checkpoint, or public recognition record into a stronger claim than the source supports.

VISUAL STANDARD

Pages use the same navy, cream, gold, and blue system; the same header, exhibit number, visual frame, caption blocks, source line, and footer.

SCOPE

The book is a visual portfolio and evidence index. It is not a patent opinion, clinical validation report, meteorological certification, or independent review of every underlying claim.

The Audit Path

WHAT THIS EXHIBIT SHOWS

A seven-stage visual path from facts and jurisdiction through procedural validity, issue decomposition, case selection, adversarial check, and final output.

CAREFUL READING

This is an architecture and communication exhibit. It illustrates a controlled review sequence; it is not itself a filing certification.

SOURCE PROVENANCE

github.com/Grounded-DI/BriefWise_DI2

file: BriefWise_Deterministic_Audit_Path_Diagram.PNG

commit af9d344c87a4

500+ Source-Checked Authorities

WHAT THIS EXHIBIT SHOWS

A certificate page documenting a source-checked authority checkpoint and its audit ledger.

CAREFUL READING

The repository expressly preserves attorney review, official-source verification, citator treatment, quotation and pinpoint review, and jurisdictional validation as remaining requirements.

SOURCE PROVENANCE

github.com/Grounded-DI/BriefWise_DI2

commit af9d344c87a4

file: GroundedDI_BriefWise_DI2_500_Source_Checked_Authority_Audit_Checkpoint_2026-06-14.pdf.pdf

The VerdictBridge Runtime Stack

WHAT THIS EXHIBIT SHOWS

A layered visual showing how facts, law, exclusions, legal elements, damages, gates, and release conditions are assembled into a controlled artifact.

CAREFUL READING

The page communicates system structure. It should be read as an architecture map, not as proof that every depicted layer was independently validated in every deployment.

SOURCE PROVENANCE

All four internal hashes match between runs.

VerdictBridge - Five-Hash Replay Audit

Page 1

WHAT THIS EXHIBIT SHOWS

A compact certificate reporting matching archive and internal artifact hashes across two VerdictBridge runs.

CAREFUL READING

A matching hash establishes byte identity for the compared artifacts. The exhibit does not, by itself, establish independent fresh-generation provenance.

SOURCE PROVENANCE

github.com/Grounded-DI/VerdictBridge

file: VerdictBridge_Legal_Reasoning_Five_Hash_Replay_Certificate.pdf

commit 34be7f388f40

Novel Tornado Detection Record

HazardWise / public event evidence

WHAT THIS EXHIBIT SHOWS

A preserved screenshot-based record concerning a June 19, 2025 weather-alert event and comparative system observations.

CAREFUL READING

This exhibit preserves what the supplied record shows. It is not presented here as independent meteorological validation or a public-safety certification.

SOURCE PROVENANCE

github.com/Grounded-DI/DI-HazardWise

file: Novel_Tornado_Detection_Evidence.pdf

commit e9833e57d38f

Corridor Forecast

StormWise DI² / southeastern Pennsylvania

WHAT THIS EXHIBIT SHOWS

A compact geographic corridor visual showing forecast bounds and a tighter inner corridor for a southeastern Pennsylvania event.

CAREFUL READING

The page is useful as an example of structured forecast output and uncertainty bounds. It does not, alone, establish forecast skill or operational authorization.

SOURCE PROVENANCE
github.com/Grounded-DI/DI-Weather
file: StormWise DI2 Corridor Forecast - SE PA.pdf

commit f7ba20b8fe67

Real Weather Audit

StormWise DI² / West Chester–Exton, July 2026

STORMWISE DI2

REAL WEATHER AUDIT

West Chester / Exton, Pennsylvania - July 2026

Chronological, evidence-preserving assessment of forecast evolution and local rain onset

Runtime FastPath 5.6 / Tier 16	Audit endpoint First visible local drops	Station time 12:47 PM EDT, July 18, 2026
-----------------------------------	---	---

E10: Direct-observation photograph showing visible droplets on the DI Weather Station railing. The photo corroborates precipitation onset but does not establish measurable accumulation.

AUDIT STATUS

Final as to the first visible local-raindrop endpoint. First measurable rainfall remains unresolved because no gauge reading or accumulation timestamp was supplied.

Page 1

WHAT THIS EXHIBIT SHOWS

A polished audit cover documenting a first-visible-raindrop endpoint and separating that observation from unresolved measurable accumulation.

CAREFUL READING

This is one of the strongest exhibits because it demonstrates evidence separation: the final page is precise about what the supplied photograph does and does not establish.

SOURCE PROVENANCE

file: DI_Weather_Station_Audit_West_Chester_Area_July_18_2026.pdf

commit 67034ce975b1

CleanWaterWise Cascade

CLEANWATERWISE / CASCADE

SOURCE SIGNAL → THRESHOLD → ACTION ROUTE

Normalized from the public CleanWaterWise GitHub demonstration text.

WHAT THIS EXHIBIT SHOWS

A source-described cascade from contamination signal to deterministic trigger to proposed regulatory and litigation actions.

CAREFUL READING

This page is a normalized visual rendering of the GitHub demonstration text. The underlying scenario is retrospective and synthetic; it is not a regulatory finding or public-health directive.

SOURCE PROVENANCE

github.com/Grounded-DI/DI-CleanWaterWise
file: CleanWaterWise_NY_Town_Demo.md

commit 09469030b78d

Evidence Before Interpretation

RFI / EVIDENCE-FIRST REASONING

PUBLIC-SAFE EDUCATIONAL STRUCTURE

Visible evidence → interpretation → certainty → needed confirmation

WHAT THIS EXHIBIT SHOWS

A four-part chain separating visible evidence, interpretation, certainty, and needed confirmation in radiological reasoning.

CAREFUL READING

The source expressly describes this as educational and not clinical AI, a diagnostic tool, or a medical device. That boundary is part of the exhibit.

SOURCE PROVENANCE

github.com/Grounded-DI/DI-Radiological-Analyzer-Demos-
file: README.md

commit 672a58b1b776

Mission-Critical Failure Tree

WHAT THIS EXHIBIT SHOWS

A visual failure tree that decomposes mission risk into configuration, entry geometry, thermal protection, plasma/comms, aerodynamics, parachute, and recovery branches.

CAREFUL READING

This is a structured engineering-analysis exhibit. It is not a flight-safety certification, mission authorization, or substitute for agency analysis.

SOURCE PROVENANCE

github.com/Grounded-DI/Rocket_Analyzer-
file: Rocket_Analyzer_Failure_Tree_Demo_Artemis_II_Reentry.jpeg

commit f8b6d50ec6f1

MathWise / fixed-case mathematical certificate

Global Multirow Coercivity Certificate

WHAT THIS EXHIBIT SHOWS

A concise certificate page for a fixed Erdős Problem 125 setup, with a stated target, finite-state conditions, and operator bounds.

CAREFUL READING

The repository README expressly states that this is a reproducible fixed-case certificate, not a full solution to the broader problem.

SOURCE PROVENANCE

github.com/Grounded-DI/MathWise_Erdos_125_Global_Multirow_Coercivity_Certificate
file: Global_Multirow_Coercivity_Certificate.pdf

commit 9967c0504cf1

Erdős 124 Fixed-Case Proof

Fixed-Case Certificate for $D = \{3, 4, 7\}$, $k = 1$

MathWise DI² Fixed-Case Proof Package

1 Scope and Non-Claims

This proof package concerns only the fixed case

$$D = \{3, 4, 7\}, \quad k = 1.$$

The result proved here is only

$$[582, \infty) \subset A_1(\{3, 4, 7\}).$$

No general BEGL conjecture is claimed.
No result is claimed for any other set D .
No result is claimed for $k \neq 1$.
No lower endpoint below 582 is claimed.
No optimality claim is made.
No density or asymptotic claim is made.

2 Theorem Statement

Let $A_1(\{3, 4, 7\})$ denote the set of integers representable as a subset sum of distinct powers generated by

$$3^a, \quad 4^b, \quad 7^c,$$

with positive exponents.

Theorem 1 (Fixed case $D = \{3, 4, 7\}, k = 1$).

$$[582, \infty) \subset A_1(\{3, 4, 7\}).$$

3 Initial Power List and Interval Certificate

The initial ordered power list is

$$b_1, \dots, b_{15} = 3, 4, 7, 9, 16, 27, 49, 64, 81, 243, 256, 343, 729, 1024, 2187.$$

The certified interval is

$$[582, 4460] \subset \text{SubSum}(b_1, \dots, b_{15}).$$

The fixed certificate parameters are

$$M = 582,$$
$$L_{15} = 4460 - 582 = 3878,$$

1

WHAT THIS EXHIBIT SHOWS

A fixed-case certificate page for $D = \{3, 4, 7\}$, $k = 1$, supporting a stated interval inclusion under the supplied proof package.

CAREFUL READING

The registry distinguishes fresh local replay from external verification and does not use this fixed-case record to claim resolution of a broader mathematical problem.

SOURCE PROVENANCE

commit 5bc298b21ade

file: FixedCase_D347_k1_Proof_EXTERNAL_REVIEW_REPLAYABLE.pdf

Breed Phenotype Reverse-Engineering

Deterministic visual assessment artifact

F1b Mini Goldendoodle Clean First-Pass Phenotype Artifact

Page 1

Breed Phenotype Reverse-Engineering Artifact

Clean first-pass version — no alternative-breed overlay applied

Subject: small apricot curly-coated dog photographed in profile, standing, seated, and overhead views.

Primary assumption: the supplied F1b mini goldendoodle information is materially reliable.

Final determination	F1b mini goldendoodle phenotype; poodle-dominant.
Best single-point reconstruction	75% poodle / 25% golden retriever
Defensible visual tolerance band	Poodle: 72–80% Golden retriever: 20–28%
Confidence level	Moderate-to-high for phenotype fit; unresolved without DNA test or pedigree records.

Reference images used: standing/profile, seated/front profile, and overhead structure views.

Executive finding

Under the stated assumption that the F1b representation is accurate, the visible phenotype reverse-engineers cleanly to a **poodle-dominant mini goldendoodle** centered at approximately **75% poodle and 25% golden retriever**.

The body structure supplies the strongest poodle signal. The softer face, warmer expression, looser ear/facial furnishing, and less severe pure-poodle silhouette preserve a credible golden retriever component.

This is a visual consistency artifact, not ancestry proof. It asks whether the observed morphology fits the claimed F1b split. On the visible record, it does.

Visual phenotype assessment only. Not a DNA test, pedigree certification, veterinary diagnosis, or seller verification.

WHAT THIS EXHIBIT SHOWS

A structured visual artifact that records phenotype observations, comparison images, and an executive finding.

CAREFUL READING

This is an assessment and demonstration artifact. It should not be read as a veterinary diagnosis or a genetic determination without domain-specific validation.

SOURCE PROVENANCE

github.com/Grounded-DI/Deterministic-Visual-Assessments-

commit 2edb045a5ecd

file: F1b_Mini_Goldendoodle_Deterministic_Phenotype_Artifact_With_Appendix_and_Comparison_Demo_Involving_Four_External_Probabilistic_LLMs.pdf

Snow Forecast Confirmation

WHAT THIS EXHIBIT SHOWS

A public-facing forecast and confirmation image pairing a locked snowfall corridor with a later reported total.

CAREFUL READING

The image is a public record of the posted result. It is not independently audited here for gauge methodology, forecast comparison, or regional representativeness.

SOURCE PROVENANCE

github.com/Grounded-DI/DI_Weather_Station

commit 67034ce975b1

file: Ben_Frankin_6.6_Inches_Snow_Confirm_Grounded_DI_Forecast_6.4_Plus_Or_Minus_0.4_Inches_Locked_55_Hours_Out.jpg

Public Recognition Record

WHAT THIS EXHIBIT SHOWS

A preserved conversational screenshot in which a third-party system identifies the inventor and describes elements of the Grounded DI framework.

CAREFUL READING

Recognition is search-surface or conversational evidence, not independent technical validation. It belongs in the book as provenance context, not as a proof certificate.
