ClarityScan AI v1.0 (beta) >

indicated.

Suggested Next Steps:

1. **Clinical Correlation:** Assess for any history of previous thoracic surgery, trauma, or chronic pulmonary disease.
2. **Comparison:** Review prior chest X-rays for baseline.
3. **Optional:** Consider a lateral view or CT chest if clinical suspicion persists.

Would you like a structured radiology report draft or flagged heatmap overlay to accompany this finding?

STRUCTURED RADIOLOGY REPORT DRAFT

FLAGGED HEATMAP OVERLAY

PRELIMINARY CHEST X-RAY ANALYSIS (PA VIEW)

INDICATION: Evaluate for pulmonary or cardiac pathology

COMPARISON: No prior imaging available.

FINDINGS: Certainty Score: 94%

NORMALS:

- Lung fields are well-aerated.
- No evidence of mass lesion or cavitation.
- Cardiac silhouette is normal in size and shape.
- No pleural effusion or pneumothorax.
- Diaphragms are intact with clear costophrenic angles.

NOTABLE OBSERVATION:

Mild rightward deviation of trachea and mediastinum
