

A stable title for every book.

Grounding DI — Evidence and Decision Library

Nine books · 260 pages · Four subject groups

This editorial edition puts the catalog's subject titles onto the selected book covers and reconciles affected reading guides, running labels, index headings, and PDF metadata. No new sequential book numbers are assigned.

Seven covers were replaced in place. Weather RC1 and Harvey retain their existing covers. Every book retains its original page count. Historical screenshots, exhibits, source evidence, dates, and qualifications remain preserved.

This is a presentation and navigation revision. It is not a new substantive audit, certification, or publication approval of the underlying material.

The Record_Index.csv identifies each input and final PDF by SHA-256 and lists the changed pages. The change log separates page preservation from whole-file byte identity.

The nine-book collection

Subject / current title	Legacy identity	Pages
Exhibits / Selected Exhibits — Foundations	Book 1	18
Exhibits / Selected Exhibits — Systems and Applications	Book 2 / Part II; fixed edition	18
Public Record / Public Record — Chronology	Book 3	18
Public Record / The Evidence Arc	Book 6	23
Public Record / The Control Plane	Book 7	23
Case Studies / Before Reality Resolved — DI Weather Station	Unnumbered; Release Candidate 1	55
Case Studies / MathWise / Erdős — Mathematical Record	Book 5	23
Legal / Law Firm Decision and Evidence	Unnumbered	59
Legal / BriefWise — Harvey Benchmark Audit	Unnumbered; new book	23

For a legal audience, begin with Law Firm Decision and Evidence, followed by BriefWise — Harvey Benchmark Audit. For an overview, begin with Selected Exhibits. Use Public Record for chronology and governance, and Case Studies for depth.

Historical labels and reading order

The earlier compendium had seven sections, not a consistent Book 1–7 sequence. Section numbers identify that historical compilation; they are not current book identities.

Historical section	Contents	Compendium pages
I	Selected Exhibits — Foundations	5–22
II	Selected Exhibits — Systems and Applications (fixed)	23–40
III	Public Record — Chronology	41–58
IV	The Evidence Arc (legacy Book 6)	59–81
V	The Control Plane (legacy Book 7)	82–104
VI	Before Reality Resolved (unnumbered RC1)	105–159
VII	MathWise / Erdős (legacy Book 5)	160–182

No document explicitly titled Book 4 was found in the source catalog’s reviewed set. Weather occupies a subject slot but was not identified as Book 4. No missing book is invented.

The 182-page compendium remains an earlier archival snapshot, not a tenth book. It is not included in this nine-volume ZIP. The law-firm and Harvey volumes sit outside that historical compilation.

Version reconciliation

Selected Exhibits — Systems and Applications

The selected input is the fixed 18-page edition, not the legacy alternative excluded by the earlier compendium's curation ledger. Only current labeling and navigation are revised here.

Weather: RC1 and v0.3 remain distinct

The working copy remains the embedded Release Candidate 1. The older standalone v0.3 was labeled pre-production. The prior catalog reports differences on 17 of 55 pages, including geographic descriptions, comparison periods, and source-ledger entries. This revision does not repeat that historical comparison or upgrade RC1's release status.

Preserved historical comparison record

The prior catalog records rendered matches for four standalone editions and 101 extracted pages from Evidence Arc, Control Plane, and Weather. Those findings concern the earlier assembly. Revised files are no longer described as byte-identical source copies.

Current checks: nine input hashes verified; all 260 book pages retained; untouched pages compared in text and rendered pixels; page dimensions, orientation, and link targets checked. See `CHANGE_LOG.md` for changed-page counts and scope.

Scope and maintenance

Books remain separate from technical specifications

Tier 20 engineering candidates, conformance packages, runtime cards, Execution Locks, and DIP source documents belong in technical reference. They are not additional books in this collection. Their status is not changed by this editorial revision.

Stable naming

Identify books by subject. Keep historical book numbers, source filenames, dates, and edition status in the index. Preserve replaced editions separately. Do not renumber existing titles when a new book is added.

What is included

Four subject folders containing nine PDFs; this catalog; Record_Index.csv; CHANGE_LOG.md; and SHA256SUMS.txt. The separate delivered catalog is byte-identical to START_HERE_Master_Catalog.pdf. A detached checksum identifies the final ZIP.

Source scope remains the nine selected volumes and the supplied master catalog. The originals remain unchanged. This pass updates current editorial identities; preserved source exhibits may still contain historical titles and numbers.
